BINA TENAGA

ENERGY SDN BHD

MEASUREMENT & CALIBRATION | UNIQUE DESIGN & INSTALLATION |

PFCS () | COMPREHENSIVE MAINTENANCE

# **About Company**

- Bina Tenaga Energy has been established in 2006 as a sole proprietor company.
- Bina Tenaga Energy Sdn Bhd has been established in 2021 with the same product & owner
- Certified by SIRIM Qas International Sdn Bhd
- Product listed in MyHijau and MySTI Directory

Bina Tenaga Energy Sdn Bhd ("BTESB") principally engaged in correcting Power Factor and optimising efficient power usage via our PFCS equipment to reduce an electricity overheads.

With over 15 years' experiences and proud records in reducing three main components of energy (i.e) kWh, kVar & kVarh, we offer a total sustainable energy efficiency solutions that benefits not only end users but to the government, power producers and distributors as well as solar providers.

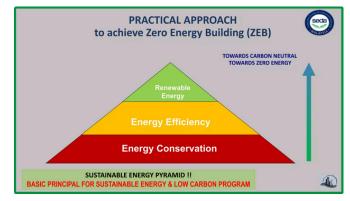

## WHAT IS POWER FACTOR

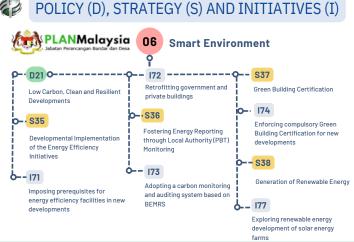

Power Factor is an index used to measure the efficient used of electricity. This index is measured on a range of 0 -1.0. Thus, a high power factor level indicates high level of efficiency electricity usage and vice versa. Low power factor means high wastage of energy supplied/used.

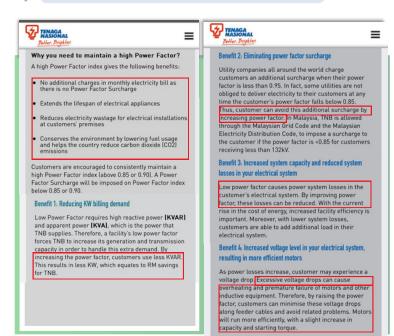

#### WHY ENERGY EFFICIENCY (EE) IS IMPORTANT?

 (National Energy Policy (NEP) 2020-2040) - Aims to improve economic resilience and ensure energy recovery while achieving equality and universal access as well as ensuring environmental sustainability.

## WHAT TNB SAYS ABOUT POWER FACTOR?

Energy efficiency can be defined using the same or less amount of energy to produce the better output or using less energy to accomplish the same task or to enjoy the same comfort level.

#### IS PFCS LEGAL? WHAT SURUHANJAYA TENAGA (ST) SAYS

A statutory body established under the Energy Commission Act 2001, Suruhanjaya Tenaga (ST) or the Energy Commission is responsible for regulating the energy sector, specifically the electricity and piped gas supply industries, in Peninsular Malaysia and Sabah.

#### Suruhanjaya Tenaga Mission Energy Commission

The Energy Commission aims to balance the needs of consumers and providers of energy to ensure safe, secure, reliable supply and economic efficiency & affordability, protect public interest, and foster economic development and competitive markets in an environmentally sustainable manner.

MEASUREMENT & CALIBRATION | UNIQUE DESIGN & INSTALLATION |

**Other Benefit** 

Reduce OPEX for maintenance Prolonging CAPEX life cycle

MEASUREMENT & CALIBRATION | UNIQUE DESIGN & INSTALLATION |

Benefit 1: To eliminate power factor surcharge

#### **Desktop analysis**

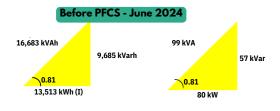

ltem	Before PFCS	After PFCS	
	June 2024	Jul 2024 (After 7 Days)	Aug 2024
kWh	13,513	12,643	11,895
kVah	16,683	14,532	12,015
kVarh	9,685	7,202	1,425
PF Level	0.81	0.87	0.99

#### **Cause of drop in PF**

- Power factor unit drop due to supply of energy is come from 2 sources Grid & Solar
- Power factor unit has been recalculated by using new kWh proportion from grid, while kVarh demand still same as the reactive power is demanded by internal equipment

#### kVar compensation calculation

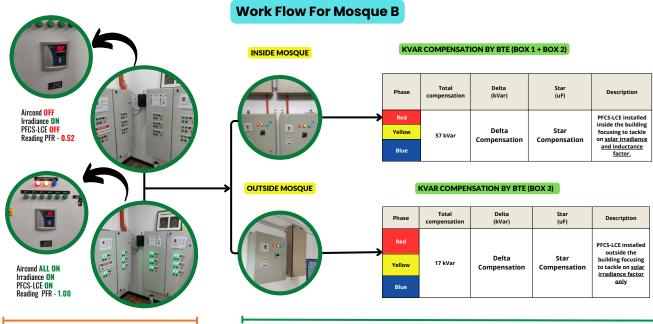

After PFCS - July 2024

After PFCS - Aug 2024

Macro level compensation

#### Micro level compensation

# NORMAL CAPACITOR BANK

#### **1. Internal Connection**

### 2. IEC (International Electrotechnical Commission)

## 5. Impact On kWh Distribution

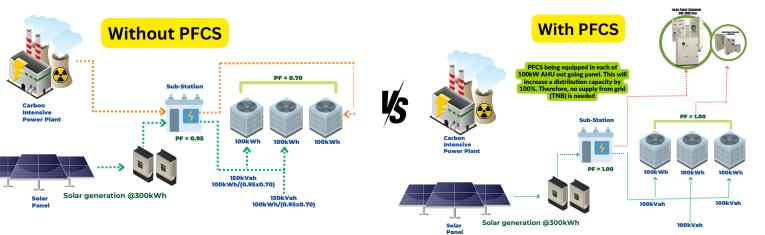

### 3. SIRIM Performance Testing Comparison Table for PFCS Bina Tenaga

#### 4. IEC/EN 61921 for Custom-Made Model at Incoming Distribution Level

Normal Capacitor Bank	PFCS Bina Tenaga	
Centralized compensation	Macro-Micro integrated compensation	
Protect power factor unit at incoming level	Protect power factor unit at incoming-outgoing level	
Smoothen kWh flow at incoming level only	Smoothen kWh flow at all distribution level	
Unoptimized distribution of solar energy (300 kWh x solar tariff + 100kWh x grid tariff)	Optimized distribution of solar energy ( 300kWh x solar tariff)	

# **COMPREHENSIVE MAINTENANCE PACKAGE**

PREVENTIVE MAINTENANCE	<b>REMEDIAL MAINTENANCE</b>
(full costs covered)	(separate price to quote)
2 times visit per year for checking the	Specific checking relating to main
health of PFCS-Bina Tenaga ( Data	capacitor bank & the whole reactive
Logging, Ampere & Volt Checking )	distribution line
To make replacement parts and component for the installed PFCS-LCE	To propose new change of parts and components for main capacitor bank in MSB (if necessary)
Gradually upgrading process of kVar Compensation will be done on to the PFCS-LCE (additional reactive compensation will be advised)	*measurement report to be submitted
